INFORMATICA SUCCESS STORY – DATA INTEGRATION (CLOUD)

VISIER CAN NOW COMPLETE MASSIVE DATA UPLOADS OF 17+ HOURS IN UNDER 40 MINUTES USING INFORMATICA CLOUD

SOLUTION IN BRIEF – DATA INTEGRATION (CLOUD)

Visier had built a powerful, game-changing analytic and planning solution but it needed an equally innovative partner to solve the unique data integration challenges posed by the heterogeneous and fragmented HR application space. With Informatica Cloud, Visier now has a partner that not only can help it solve the immediate problem of getting the data from its enterprise HR business users – without relying on IT – for the initial and ongoing transformations but also develop the advanced connectivity and embedded integration that will propel the business forward in the future.

Business Need:

- Capture data from multiple HR sources, such as Oracle PeopleSoft and Oracle Fusion HCM, ADP, SAP HCM, Workday and SuccessFactors, and transform it into a format that can be easily consumed by Visier's cloud analytics applications.
- Develop new, low-touch integration processes that will enable it to market its analytics solutions to a broader range of companies.
- Find a partner that can help them improve usability and shorten time-to-integration, to increase customer satisfaction and broaden the reach of its market even further.

Challenges:

- The HR line of business application space is highly fragmented, with many companies providing multipoint solutions, which means multiple data sources and formats that need to be transformed before they can be consumed for analysis.
- Visier has over 50 enterprise clients that need to have millions of rows of data updated on a daily, weekly or monthly basis.
- Visier's existing integration process was highly serialized and labor and time intensive.
- Visier's target market consists primarily of HR and business users that are typically underserved by IT and unfamiliar with the mechanics and requirements of data analytics.

"Informatica Cloud is a partner in the truest sense of the word. Their team is clearly committed to understanding our goals and has worked hand in hand with our engineers to develop innovative and creative data integration solutions to solve the unique challenges of our business".

—Ryan Wong, Founder and CTO, Visier
